Description

The APEX Magnum delivers great on-the-water performance. This wide body-low profile baitcast provides the power and durability you need with increased line capacity and a super strong and smooth drag rated at 17.6 lbs. Featuring ten stainless steel ball bearings, extra long carbon fiber handle that won't bend or break, and the patent pending Drag Tracking Technology DTT gives you the casting distance and fish fighting power needed in an inshore reel. The patent pending "Drag Tracking Technology" system on the new Ardent Magnum Reel allows the level wind eyelet to track in parallel with the line location on the spool as line is being pulled from the reel in drag mode. This reduces the chance of line break on large fish by eliminating the sharp angles caused by the level wind eyelet being out of sync with the line location on the spool in drag mode as is the case on all other reels
