Description

Gliss is a new 4th form of fishing line that is produced by a breakthrough extrusion process of high modulus polyethylene fibers. Gliss has qualities of both monofilament and braid. Gliss has zero stretch and the lowest diameter to breaking strength of any line. .010 diameter Gliss equals 4kg/8lb strength.

PRO ANGLER TESTING & COMMENTS: After a very successful intro by WFT in Europe, Gliss has been extensively tested in North America. Testing has been performed by bass elite and FLW tour anglers in addition to saltwater and freshwater professional guides.

"I caught fish with Gliss that I could not have caught with other line due to its incredible sensitivity.

Softness of Gliss produces superior castibility resulting in increased distance I don't get with braid

Gliss is the easiest line I've ever fished because it has zero line twist

When dropshotting, I can get down faster due to it's small diameter and cuts right through the water.

Fishing Line: Gliss - 8 pound test

Gliss is much thinner than typical braid which allows leaders to be tied with out hanging up in the micro guides of bass rods.

I've been a pro for 20 years and haven't purchased 1 spool of line but I will buy Gliss and compete with it. "

If you want to cast light lures a long way, there is simply no substitute for Gliss. I use it inshore with suspending twitchbaits and topwaters. I tie Gliss to a swivel, and then use a short leader of fluoro or mono. This setup allows me to easily cast past the fish I am targeting, so I can keep the lures in the water longer. This, along with the fact that the fish don't seem to see the Gliss, has increased my catch rate quite a bit. It also lasts me several months, just like braid. My only complaint is that they don't sell it in bulk spools anymore.

I have used three weights of Gliss line (#8, #18, #24) over the course of the summer and found its performance sub-par. While it is true that it does not cut into itself on the reel spool like braid and it has good tensile strength, the cons outweigh the pros in my opinion. The Gliss fibres seem very brittle and fray very easily. After just a few hours of fishing you will notice numerous frays starting to form especially around high rub areas like leader knots. Additionally, while I can tie several different leader knots with braid and have no issues, the only knot I found for leaders with Gliss is the FG knot. Uni to Uni, the blood knot and others all cut the Gliss and cause it to break. This did slightly differ on line weight, but in my case I was tying #18 Gliss to 12lb Fluoro, or #24 Gliss to 12lb Fluoro/20lb Mono, and #8 Gliss to 8-10lb Fluoro. In each of these cases after I caught a fish I would need to retie my leader knot, otherwise on the next set it would fail. I also found that it does not handle line twist well. Because it is supple line twist mixed with a little wind can very shortly turn into massive knots.

I do appreciate how supple Gliss is, as well as the colour choices that do not fade. It might work well on Ice fishing setups for pan fish because it drops off the spool nice and does not absorb as much water, but next year I will switch all my spinning reels back to braid and straight fluorocarbon.
